## Aliante 10 Black Limited

"The best-sounding subwoofer chassis has been the Mac Audio Aliante 12 Black Limited since autohifi 4/2007." Now the 500 Euro, 10 inch (25 cm) Mac Audio Aliante 10 Black Limited wants to show what it can do.

With a maximum installation depth of 78 millimetres its aluminium-steel basket is kept very flat. Inside sits a

three-fold ferrite drive, with one in front and two behind the pole plate. The gigantic 125 millimetre voice coil runs along the outside on the magnetic system in contrast to conventional configurations.

The completely flat and sturdy cone consists of aluminium honeycomb

and the cover and base are manufactured from glass fibre. The large protected openings in the rear panel present hardly any resistance to sound waves and they also allow the woofer to breathe freely.

The test housing is rather voluminous at 37 litres, but it has to be so. The EBP of 93 and the comparatively low linear displacement mean that it is only expedient to use a reflex housing. This ensures the speaker produces stable levels.

In terms of sound it follows in the footsteps of its big brother and its quick kicks, rich punch and a cleanly structured, dynamically deep bass leaves the competition empty handed - Excellent! "

Candidates in the test:

Rockford Fosgate Punch P3 SD 212, Kicker CVT-104, Kenwood KFC-WPS 1200 F, Carpower Pulsar-10, Emphaser EF 10 N-G5
